

Upright Freezer Temperature Setting

Upright Freezer Temperature Setting - If you have an upright freezer, you will need to keep the temperature regulated to minus 10 degrees Fahrenheit. To be sure it is set correctly, and calibrated, pick up another thermometer at a hardware or home improvement store. Attach it with some wire or string beside of the upright freezer's thermometer. Things to consider: The freezer. The ice cream dilemma: Ever have a hard time scooping ice cream out of it's container – well that is because of how cold your freezer is. If you would like softer scoopable ice cream consider bumping the temperature up to between 0 to 5°. As an FYI – Gellato is best between 0 to 18,...A freezer thermometer is the best way to know exactly temp your food is being stored at. Amazon carries some great options including this one. The ideal freezer temperature is 0 Fahrenheit (-18 Celsius) for all food storage. And -10 Fahrenheit (-23 Celsius) is recommended to quickly freeze food.
